Professional Summary

Backend-focused Computer Engineering student (2027) with strong Python and automation fundamentals, experienced in building data pipelines, REST API integrations, and rapid prototypes. Interested in applying experimentation, scripting, and AI-driven approaches to improve testing and quality control workflows.

Education

B.E. Computer Engineering, Pimpri Chinchwad College of Engineering and Research, Pune 2023–2027
Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

Technical Skills

Programming: Python (Automation, Scripting, Prototyping), JavaScript, TypeScript, C++
Automation & R&D: Workflow Automation (n8n, Zapier, Power Automate)
Backend & APIs: FastAPI, Node.js, Express.js, REST API Design, API Integration, JSON Processing
Data Analysis: Data aggregation, API data pipelines, performance metrics computation, SQL optimization (EXPLAIN, indexing)
AI/ML: Basic ML concepts, LLMs, Prompt Engineering, Heuristic/Rule-based systems
Databases: PostgreSQL, MySQL, MongoDB, Firebase
Tools: Git, GitHub, Linux, Docker, Postman

Experience

Software Developer Intern Prudent Agency
(Python-adjacent automation, Node.js, PostgreSQL, Instagram API, YouTube Data API, Git)

- Automated a manual reporting workflow end-to-end by building a Campaign Report Analyser that ingests and stores ad performance data (CPR, CTR, ROAS, revenue, P&L) into **PostgreSQL**, cutting manual reporting time by **60%**.
- Built REST API integrations with **Instagram Graph API** and **YouTube Data API** to automatically pull user interaction metrics (clicks, impressions, engagement rate) into the analytics pipeline, removing manual data entry.
- Applied business-process logic (CPR, CPA, ROI, net revenue formulae) to transform raw JSON API data into actionable, automated profitability reports used by the campaign management team.

Projects

BlunderZero – ELO-Adaptive Chess Engine GitHub
(Python, FastAPI, custom move-generation engine)

- Built a **FastAPI** backend with ELO-based adaptive difficulty (800–2000 rating range), serving **1,000+ game sessions**.
- Engineered a trap-detection heuristic, increasing engine win rate by **22%** against intermediate players.
- Reduced move generation overhead by **30%** using precomputed bitboard attack maps.
- Designed **4 pluggable tactical modules** (fork, pin, skewer, discovered attack), enabling targeted training on specific tactical patterns – demonstrating modular, rule-based AI logic design.

Invennzy – Inventory & Business Management Live | GitHub
(Node.js, Express.js, MySQL, React.js)

- Handled **200–400 API requests/day during active usage/testing** by designing a modular backend, enabling independent development and reducing failure impact across billing, inventory, and order modules.
- Improved billing query performance by **20–25%** by introducing MySQL indexing and optimizing joins, reducing execution time of frequent queries as observed via EXPLAIN analysis.
- Implemented **3-tier RBAC** (Admin / Manager / Staff) using JWT middleware, ensuring secure access control with **low-overhead request validation (100ms per request in testing)** across inventory, orders, and billing APIs.

Certifications

Oracle Database Programming with SQL – Oracle Academy, 2025
MongoDB Data Modeling – MongoDB University, 2025
AWS Academy Graduate - Cloud Foundations – Amazon Web Services, 2026 Credly

Achievements & Leadership

- **1st Prize, PIC National Level Project Competition** – ranked 1st out of 50+ teams with Invennzy.
- **Winner, PBL competition** – top 5% among 200+ participants.
- **Screened candidate, SSB** – cleared written & psychological screening for Indian Armed Forces officer selection.
- **Web Development Head** – led 12-member team; delivered 4 full-stack projects in 6 months.
